

**AMENDMENTS TO CLAIMS**

Please amend claim 1, without prejudice, as follows, wherein underling indicates additions:

1. An air filtration device for intake of atmospheric air, removal of contaminants from the atmospheric air, expulsion of filtered air, and configured for operational association with a generally vertically oriented surface, said air filtration device comprising:
  - a housing defining an air flow path therethrough and having a front surface and a rear surface;
  - at least one air inlet formed in said front surface;
  - at least one air outlet formed in said housing intermediate said front surface and said rear surface, said at least one air outlet extending on a side surface located between the front surface and the rear surface for cooperation of said air outlet with a generally vertical surface to which said air filtration device is associated for enhanced dispersion of filtered air expelled through said air outlet;
  - a filter supported in said air flow path;
  - an impeller supported by said housing for moving air through said air flow path, said impeller including a central inside area;
  - a baffle plate supported by said housing for directing air flowing from said air inlet toward said central inside area; and
  - a motor for driving the impeller, the motor and impeller at least partially supported by the baffle plate.
